PROJECT DETAILS

DIPLOMA PROJECT : *"Solving patient medical problem online"*

Technology : Java, SQL

Description

In this project we developed a health care environment where clinical guidelines were developed to assist healthcare practitioners to take decision on patient's medical problems and as such they communicate with external applications to retrieve patient data to initiate medical actions through clinical workflows and transmit information

preventing wider deployment of clinical guidelines because each deployment requires a tedious custom adaptation phase.

ENGINEERING PROJECT : *Generating Query Facets Using Knowledge Bases*

Technology :

Front End	-	VISUAL STUDIO, ASP.NET
Back End	-	SQL SERVER 2008

Description

We propose a systematic solution, which we refer to as QDMiner, to automatically mine query facets by extracting and grouping frequent lists from free text, HTML tags and repeat regions within top search results. Experimental results show that a large number of lists do exist and useful query facets can be mined by QDMiner. We further analyze the problem of list duplication and find better query facets can be mined by modeling fine-grained similarities between lists and penalizing the duplicated lists.
